**ECL304 - Skill Lab: C++ and Java Programming**  
**Sem III**  
**2021-22**

<b>Lab Number:</b>	<b>8</b>
<b>Student Name:</b>	<b>Disha Maggu</b>
<b>Roll No :</b>	<b>09</b>

**Title:**

1. To perform Multilevel Inheritance in JAVA. Create a Person class representing name, age and address. Inherit person class to employee class with emp ID and salary factor. Inherit the Employee class to programmer class with technical skills and hike attributes. Implement valid methods to input the details from the user in the main method and display for 3 programmers.
2. To perform Hierarchical Inheritance in JAVA. Create an Employee class with attributes EmpID and EmpSalary. Also create necessary methods/constructors to accept these values from the user. Create classes permanentEmployee and TemporaryEmployee which will be derived classes of Employee. Mention hike attribute in these derived classes and calculate the total salary using generate\_salary() method for respective types of employees. Objects of the derived classes should be created and salaries for the permanent and temporary employees should be calculated and displayed on the screen.

**Learning Objective:**

- Students will be able to perform multilevel inheritance using JAVA.
- Students will be able to perform hierarchical inheritance using JAVA

**Learning Outcome:**

- To understand how to use the private members using friend function and friend class.

**Course Outcome:**

<b>ECL304.2</b>	Comprehend building blocks of OOPs language, inheritance, package and interfaces.
-----------------	---

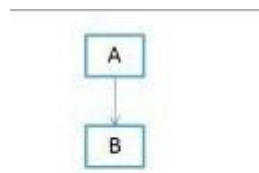

**Theory:**

- Explain in details about various inheritance types supported in JAVA

- 1. Single Inheritance :** When a class inherits another class, it is known as a *single inheritance*.

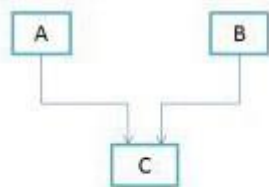

**Faculty: Ms. Deepali Kayande**

**Don Bosco Institute of Technology, Kurla(W)**  
**Department of Electronics and Tele-Communication Engineering**  
**ECL304 - Skill Lab: C++ and Java Programming**  
**Sem III**  
**2021-22**

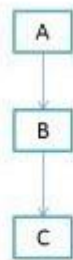

(a) Single Inheritance

1. **Multiple Inheritance** : It refers to the concept of one class extending (Or inherits) more than one base class.

(b) Multiple Inheritance

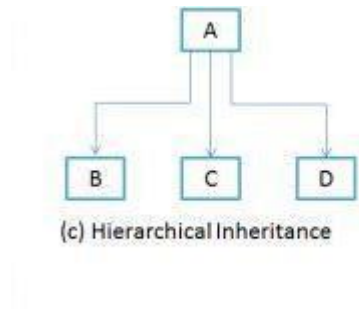

2. **Multilevel inheritance** refers to a mechanism in OO technology where one can inherit from a derived class, thereby making this derived class the base class for the new class.

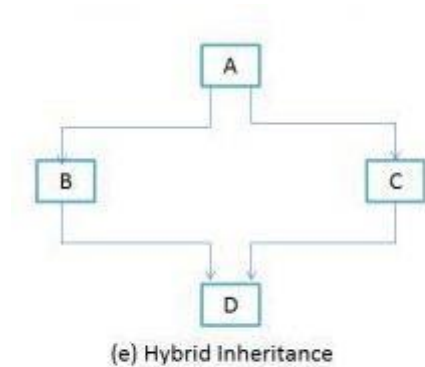

(d) Multilevel Inheritance

3. **Hierarchical Inheritance** : In such kind of inheritance one class is inherited by many **sub classes**.

**Don Bosco Institute of Technology, Kurla(W)**  
**Department of Electronics and Tele-Communication Engineering**  
**ECL304 - Skill Lab: C++ and Java Programming**  
**Sem III**  
**2021-22**

4. **Hybrid inheritance** is a combination of single and multiple inheritance. A hybrid inheritance can be achieved in the java in a same way as multiple inheritance can be!! Using interfaces.

**Algorithm 1:**

- 1- Create a parent class person and initialize its data members and take input of name, age and address.
- 2-Create the derived class of person class - employee class to take input of emp\_id and salaryfactor.
- 3-Create the derived class of person class - programmer class to take input of hike and technical skills.
- 4-Create the Main class to call the class functionalities and display the results.

**Program 1:**

```
package com.company;  
  
import java.util.*;  
  
class Person {
```

**Don Bosco Institute of Technology, Kurla(W)**

**Output Screenshot 1:**

```
Enter details of employee 1
enter name: Disha Maggu

enter age: 20

enter address: Mumbai

enter employee id: 21

enter Salary Factor: 25

enter hike: 15

enter technical skills: Coding

name is: Disha Maggu

age is::20

address is: Mumbai

employee id is ::21

Salary Factor is::25

hike is ::15

techincal skills is::Coding
```

```
Enter details of employee 2
enter name: Jasmit

enter age: 19

enter address: Panvel

enter employee id: 22

enter Salary Factor: 20

enter hike: 12

enter technical skills: Web Development

name is: Jasmit

age is::19

address is: Panvel

employee id is ::22

Salary Factor is::20

hike is ::12

techincal skills is::Web
```

```
Enter details of employee 3
enter name: Ravi Pandey

enter age: 19

enter address: Powai

enter employee id: 23

enter Salary Factor: 30

enter hike: 11

enter technical skills: Designing

name is: Ravi Pandey

age is::19

address is: Powai

employee id is ::23

Salary Factor is::30

hike is ::11

techincal skills is::Designing

Process finished with exit code 0
```

**ECL304 - Skill Lab: C++ and Java Programming**  
**Sem III**  
**2021-22**

**Algorithm 2:**

1. Creating the parent class employee and initialize its data members.(EmpId ,EmpSalary) and a basic function get details() to print the details.
2. Create 2 child class permanent employee and temporary employee that inherit employee class publically.
3. In this classes , create generate salary() that return the employee salary + hike in their salary
4. In main function, Create the object of derived class and print their respective details.

**Program 2:**

```
package com.company;
```

```
import java.util.*;
```

```
class Employee
```

```
{
```

```
    Scanner s=new Scanner(System.in);
```

```
    int emp_id;
```

```
    int emp_salary;
```

```
    Employee()
```

```
{
```

```
    System.out.println("enter empid::");
```

```
    emp_id=s.nextInt();
```

```
    System.out.println("enter empsalary::");
```

```
    emp_salary=s.nextInt();
```

```
}
```

```
void getDetails()
```

```
{
```

```
    System.out.println("EmployeeID is ::");
```
